DWO+

Reimagining digital experience for WM clients

#PositiveImpact

September 2023

Confidential

Agenda

Why is it essential for us to ensure competitiveness for the future and to create a better digital experience for our clients?

What are the core functionalities we want to offer our clients in future & what does their experience look like?

How will we translate vision into reality and bring DWO+ to life?

WHY?

Why is it essential for us to ensure competitiveness for the future and to create a better digital experience for our clients?

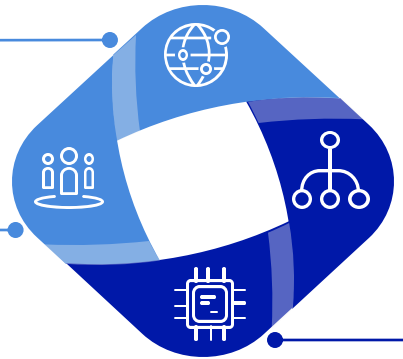

We aim to build a future-proof DWO to improve our clients' digital-led, RM-assisted experience & driving digital satisfaction

Today we are here because we have **TWO AMBITIONS…**

1 Create a foundation to **enhance the digital-led, RM-assisted client experience**, driving **digital satisfaction**

2 Craft a **future-proof global DWO+** by leveraging **existing solutions**, and developing **new solutions** to fill gaps

…and their success relies on the careful consideration of **FOUR DIMENSIONS!**

Markets
- What are the latest trends?
- What is the competition doing?

Clients
- What do clients want?
- What's their current digital satisfaction with DWO?

Organization
- Which initiatives are currently running in DB?
- What can we re-use? Synergies?

Technology
- What do we need to make it happen?
- What are the tech requirements?

In WM industry, clients are expressing concerns and priorities, highlighting what's falling short and what matters most

Why are clients are dissatisfied?

66% because of bugs and crashing

66% because downtime

58% because too many steps

56% because of complex authentication

55% because lack of customization

What is important for clients?

83% Access market research

82% Manage own portfolio

79% Access to investment ideas

79% Define own goals and needs

79% Seek support on requests & issues

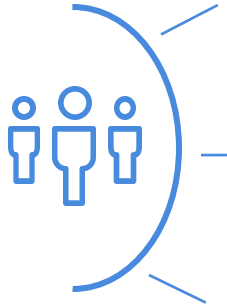

Emerging from clients globally, the key themes underscore a desire for a **seamless, personalized experience, requiring fewer steps for task execution, easy access to support, and robust security**

Source: Accenture's Future of Asia Wealth Management Survey, 2023.

To elevate the digital-led, RM-assisted client experience, we must actively listen to our clients and respond to their needs

Understanding both external and internal users is vital for identifying essential functionalities and aligning with digital experience needs

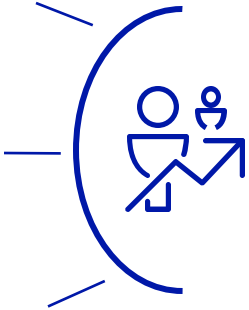

What do our clients want?

- Quick & short processes, reasonable autonomy and direct contact to RM
- Reliable, performative, holistic & personal service both on- & offline
- Staying informed on markets and finding new opportunities

What do our RMs want?

- Automate admin workload with self-service and free capacity for prospect
- Reliant, performative, competitive digital channels for clients that support me in servicing my clients
- Increase engagement and retention to create appetite for growing business

There is no one-size-fits-all solution. Instead, we should use a structured decision-making process that starts by understanding what their clients want and map “things to get right”

By listening to our RMs, we have identified four essential pillars and respective painpoints in clients' current digital journey

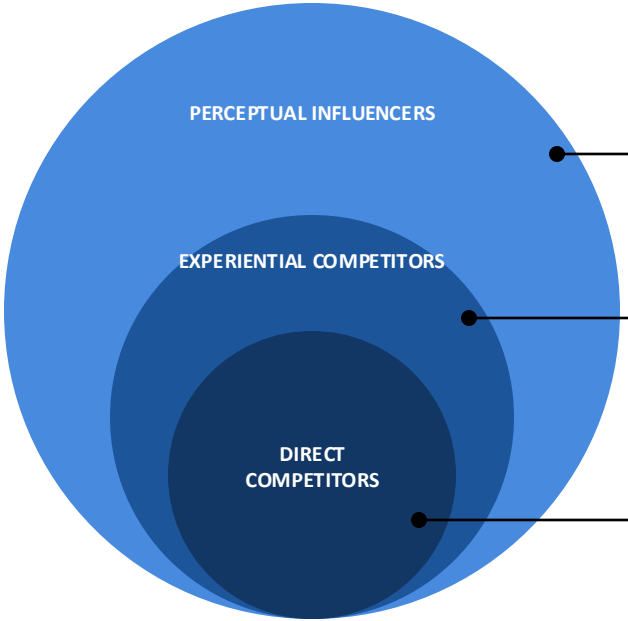

Digital Client Satisfaction

Onboarding & First Time Usage, Login	Security, Stability & Performance	Functional Scope	Help Desk & Support
Onboarding challenges marked by cumbersome steps and bugs, lead to a slower process that frustrates clients	Lack of compatibility in the system, undermining the stability, security, and overall performance, hence reputation & adoption of DWO	Limited functional features within DWO, restricting the bank's competitiveness and influencing potential clients not to choose	Absence of a fast-responding help desk, forcing RMs to spend time assisting clients with DWO issues instead of focusing on their main responsibilities
„We should test the onboarding – it is not self-explanatory."[1]	"All of [my clients] need access to live data."[1]	„Forget improving and helping, this is basic for bank to have!" (referring to statements, payments, transfers)[1]	„DWO Help Desk is needed rather than a client calling his RM."[1]

DWO

[1] RM Quotes from Expert Interviews (APAC/EMEA, July 2023) revealing problems across all 4 pillars

Clients' expectations changed as they are accustomed to digital players' CX – the expectations now extend to WM

Companies that are changing customer expectations across industries

Experiences within the Financial Services ecosystem that influence your client's expectations

Expectations are no longer limited to best-in-class within the Private Banking Industry

Client experiences offered by wealth managers are compared against top performers, not just within the industry, but across various industries, highlighting the need for new digital capabilities

Changing expectations create new trends that are reshaping the wealth management industry and unveiling a new normal

Experience Centricity

Enhanced with personalized content, direct tools & data to build literacy & control

- Client education and empowerment
- Customized self service
- Opt-in tools, content and services

Holistic Advice

Trusted coach for providing goal-based, holistic financial planning and wellness

- Beyond fiduciary (e.g., ESG, goal-based investing)
- Beyond investing; into wellness
- Making investing personal

Personalized insights

Personalized insights amplify the client experience and catalyze engagement

- Custom investment advice aligning with client's goals
- Tailored market analysis matching portfolio needs
- Dynamic asset allocation strategies

Limitless Product Choice

Broad choice across alternatives, with tailor-made bundling of product "modules"

- Explosion in product/asset choice (ESG, alternatives etc.)
- Digital distribution
- AI portfolio construction

Platform Revolution

Ecosystem integration of external services to deliver on all client needs / expectations

- Networked ecosystem
- Bundling and fragmentation of value chain
- Extensive MO / BO automation

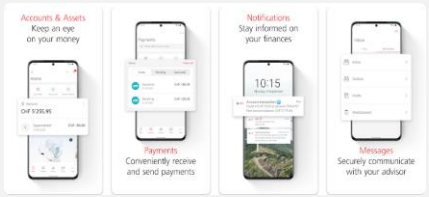

Competitors reacted and are focusing on client engagement with transactional and relationship-building features

UBS Circle One APAC

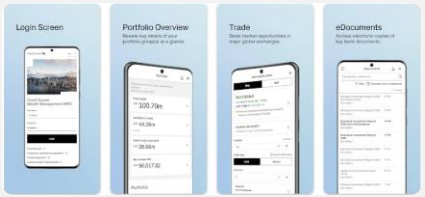

Driving client engagement with digital content & communities

UBS WM e-banking

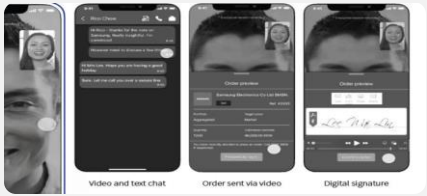

Holistic WM digital touchpoint complemented by Circle One

CS WM APAC

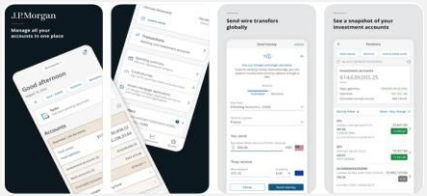

Consolidation of all accounts and trading capabilities

HSBC Asia/UK

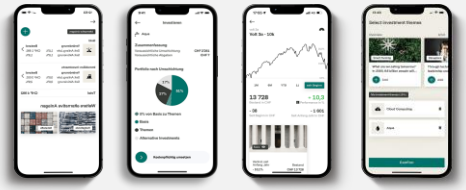

Mobile channel as communication enabler with RMs

J.P. Morgan US

Full picture of your finances all in one place and access to philanthropy

Vontobel Volt CH

Engaging clients with theme trading and impact investing

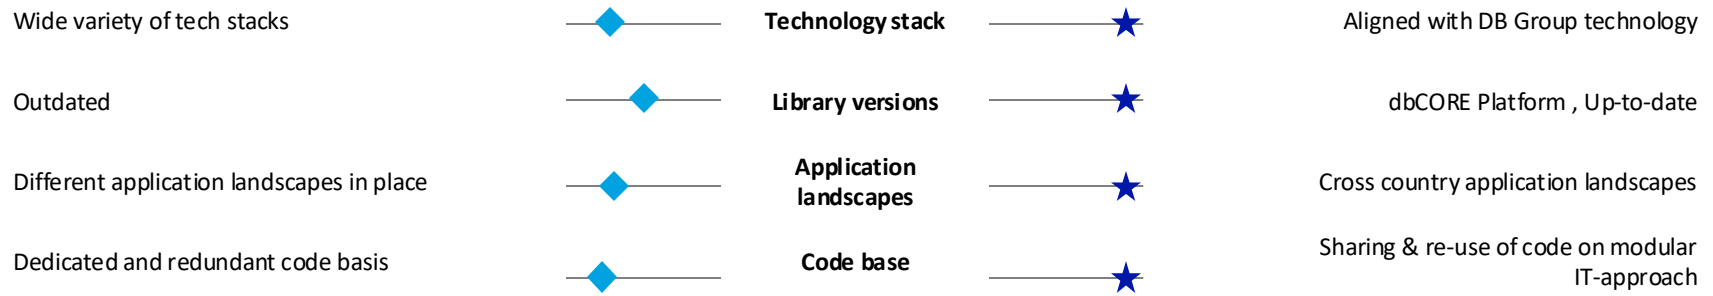

We need to update our outdated architecture to ensure stability and functionality of the future product

Status-quo

- Wide **variety of tech stacks** (React, Angular, Ionic, Cordova, etc.)
- **Outdated** versions of libraries
- Different **application landscapes** in place
- No dedicated mobile expertise available (**hybrid approach**)
- **Redundant code basis**

Ambition

- Generate **real alignment with DB group technology**
- Enable **scalable architecture** that enables IPB to build custom online channels while **harmonizing OLB & MB Banking tech stack**
- Ideally share or re-use of OLB & MB on a **platform level**
- Abstraction of underlying application landscapes in a **modular architecture-approach**

DWO+ requires a **leapfrog strategy** and although we need to **keep improving** our existing tech, we cannot invest in **legacy systems**

After carefully evaluating clients, markets and ourselves, we know that the way forward is to transform DWO into DWO+

Markets

The competition is evolving, integrating both transactional and relationship-building features into a single app to meet new expectations

Clients

Our clients expects a personalized, flawless, and secure platform that not only meets all their banking needs but also provides them with a seamless and intuitive experience

Organization

We are implementing measures and re-architecture initiatives to align with our clients' expectations and DB's overall strategy

Technology

The way forward requires a leapfrog strategy. While continuing to enhance our existing technology, we must avoid investing in legacy systems that may not align with future needs

For the future of our brand and the satisfaction of our clients, embracing digital excellence is not just a choice – it's our duty.

WHAT?

What are the core functionalities we want to offer our clients in future & what does their experience look like?

When reimagining Deutsche Wealth Online, Digital Client Satisfaction must be placed at the center of our thinking.

ONBOARDING, FTU & LOGIN

SECURITY, STABILITY & PERFORMANCE

FUNCTIONAL SCOPE

HELP DESK & SUPPORT

Core Beliefs: To ensure Digital Client Satisfaction we need to aim for significant improvements in all 4 pillars

Digital Client Satisfaction

Onboarding & First Time Usage, Login

Simplify the DWO registration both within internal processes and service journey and make it **fully digital**, **removing online journey breakage** and conversion barriers. Emphasize user-friendly design using state of the art authentication, self-service credential recovery to **align with fintechs' all-digital approach** and enhance client digital satisfaction.

Security, Stability & Performance

Prioritize a seamless and reassuring experience across all functions by ensuring a **simple, secure, fully digital, convenient, fast** and **uninterrupted journey without loading or data delays.** The focus here is on transparency and flexibility in engagement and satisfaction, reinforcing the strategic importance of these attributes as hygiene factors.

Functional Scope

Start with the **basics, then innovate.** Focusing on accurate **information, detailed analysis & self-enablement.** Over time, add functional breadth & depth to catch up with the competition, **establish personalized journeys** reflecting individual needs and preferences, and innovations to differentiate based on DB strengths.

Help Desk & Support

Create user-friendly processes to **manage issues smoothly and guiding users to the right support channel** to minimize friction. Incorporate **smart issue-handling through quick omni-channel routing**. Efficiency, as well as timely & lean processes in this area is vital to client satisfaction – failure bears significant risks of attrition.

DWO+

RM Input: From the survey, we can derive the necessary sub-functionalities per pillar to deliver on beliefs & expectations

Digital Client Satisfaction

Onboarding & First Time Usage, Login

75%

of RMs rate a **fast and straight-through digitized onboarding** to DWO as a must have

38 %

of RMs want to increase **personalization features during enrolment** of DWO as a delighter, 25% even as must have or should have.

Security, Stability & Performance

50%

of RMs rate **near real-time data for portfolio validation** and 38% rate real-time product prices as a must have

56%

of RMs rate an **online secure storage for documents** and shareable between client and bank as well as **digital signature** as a must have

Functional Scope

81%

of RMs see the **individual consolidation of portfolios for same legal relation** as a must have, 69% see it also for booking centers

50%

of RMs see a **secured messaging channel** for clients to send a request as a must have

Help Desk & Support

38%

of RMs rate a **dedicated technical Help Desk** in client's language a must have

38%

of RMs see **user manuals, short videos, contextualized help** (on all key features, in client's language) as a must have

DWO+

Source: Internal expert interview report (APAC/EMEA, July 2023), Internal RM survey (n=16 from APAC/EMEA) (August 2023)

By building on client satisfaction and the RM input, we ensure value creation for wealth management clients as well as DB

What do our clients want?

Quick & short processes, reasonable autonomy and **direct contact** to RM

Reliable, performative, holistic & personal service both on- & offline

Staying informed on markets and finding new opportunities

Client Value		RM/DB Value
Convenience & Time Savings	EFFICIENCY	RM Efficiency
Seamless & Tailored Digital Experience	TRANSFORMATION	Brand Perception & Sales Efficiency
Access to Content & other DB Services	ENGAGEMENT	AuM & Revenue Growth

What do our RMs want?

Automate admin workload with self-service and free capacity for prospect

Reliant, performative, competitive digital channels for clients that **support me in servicing my clients**

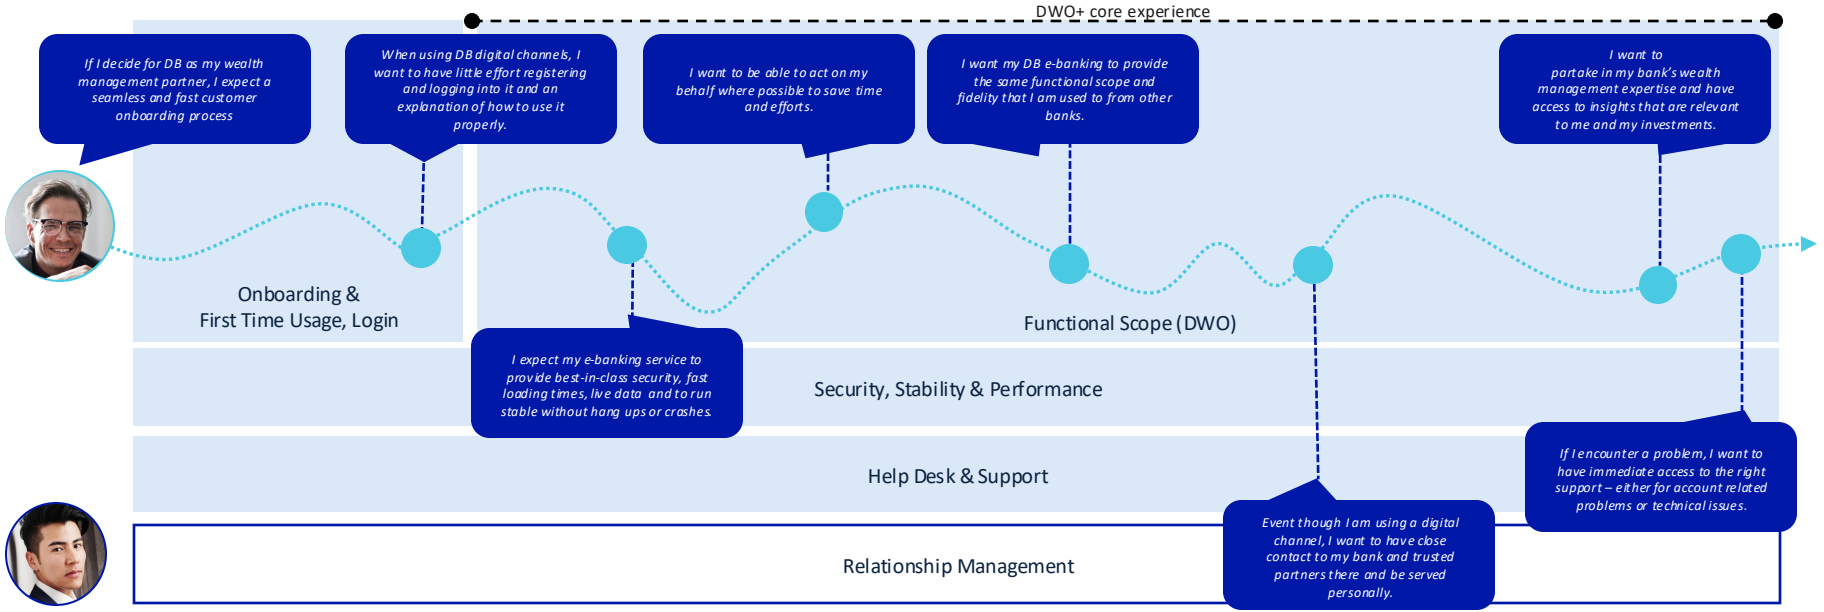

Increase engagement and retention to create appetite for growing business

Client-Facing Value Proposition

RM-Facing Value Proposition

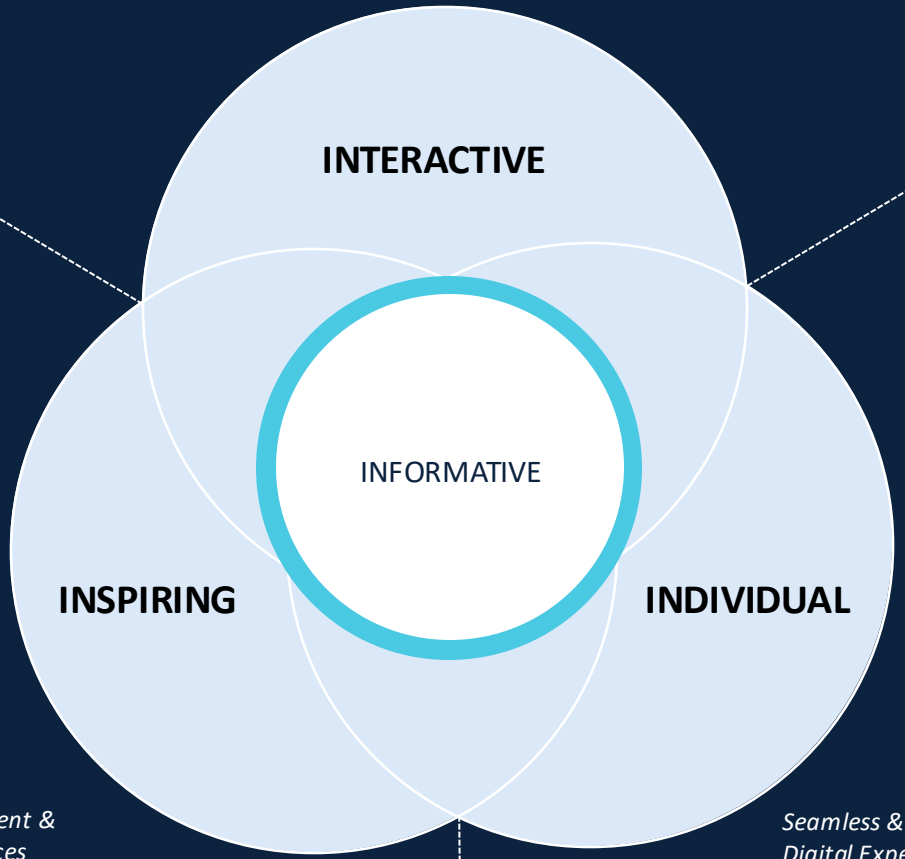

Our Vision: A seamless end-2-end journey that addresses Client Satisfaction holistically & supports RM serve their clients

A service that is seamless to enter, that not only equals but surpasses competitors in functionality, is fast, secure and stable, and provides help when needed – both from the RM & other support.

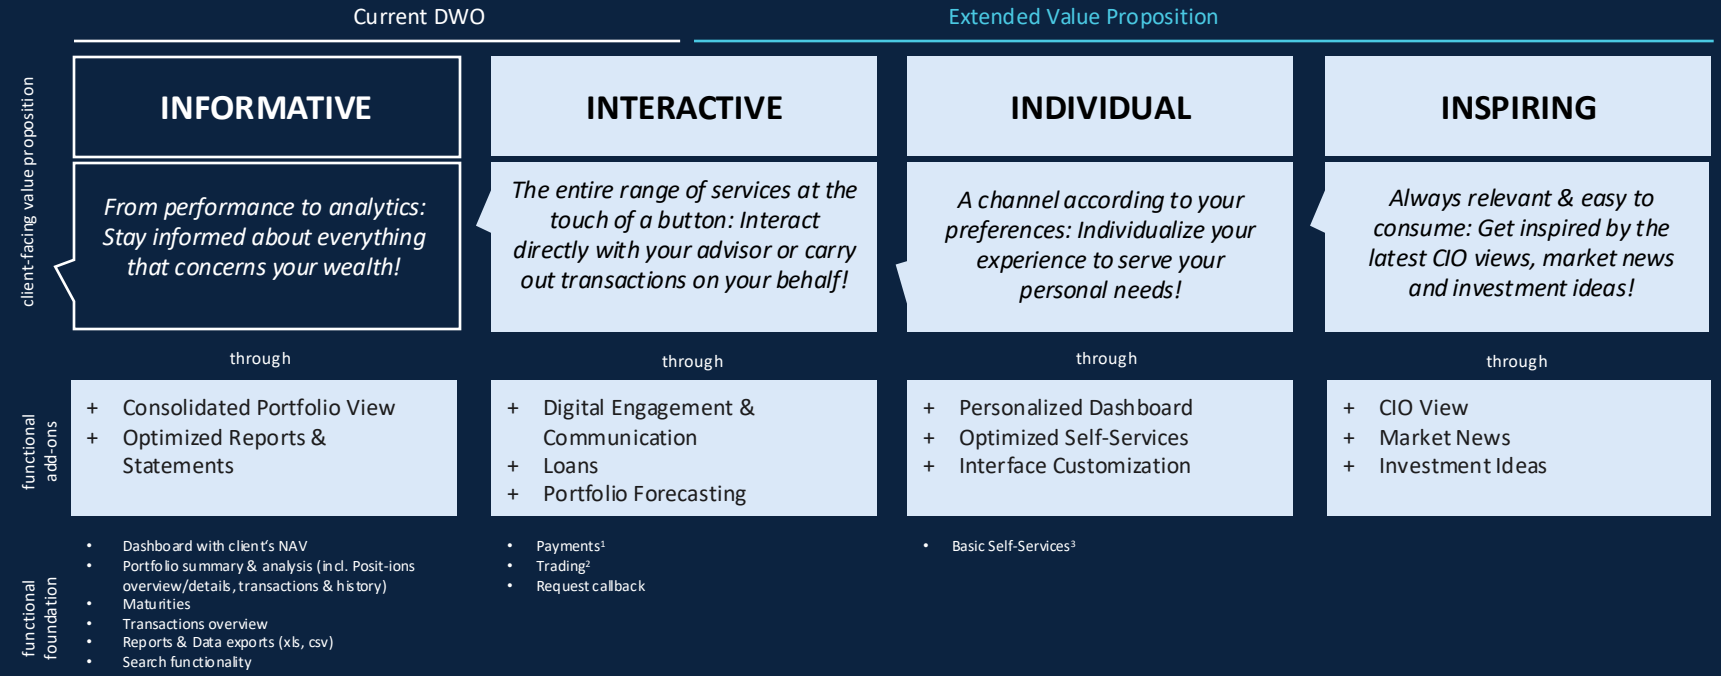

Deutsche Wealth Online +

For Deutsche Bank WM clients

Client-Facing Value Proposition: How DWO+ creates user value beyond portfolio information

Existing functional scope

DWO+ functional target scope

[1] APAC: Simple Equity Trading APP live, DWO 1.5/1.6 & future releases e.g. DWO 2.0

[2] EMEA: Payments (3rd party access for EU/UK, bespoke limits level, standing orders, bulk/multi payments)

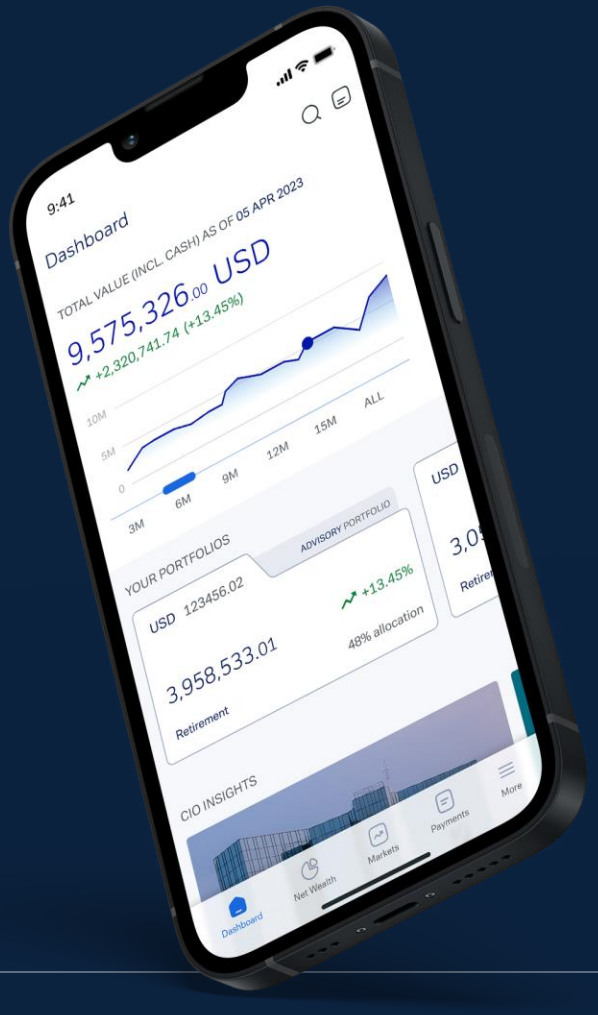

[3] EMEA: Paperless opt-in, ad-hoc reports capability

Deutsche Wealth Online +
is Deutsche Bank's new, global wealth management platform that serves clients holistically.

Stay informed about everything that concerns your wealth and individualize your experience to serve your personal needs.

Get inspired by actionable, personalized and snackable content like latest DB research and investment ideas and directly follow up on it by interacting with your advisor or executing transactions with the full DB offering at your fingertips.

Everything in one, everything in DWO+.

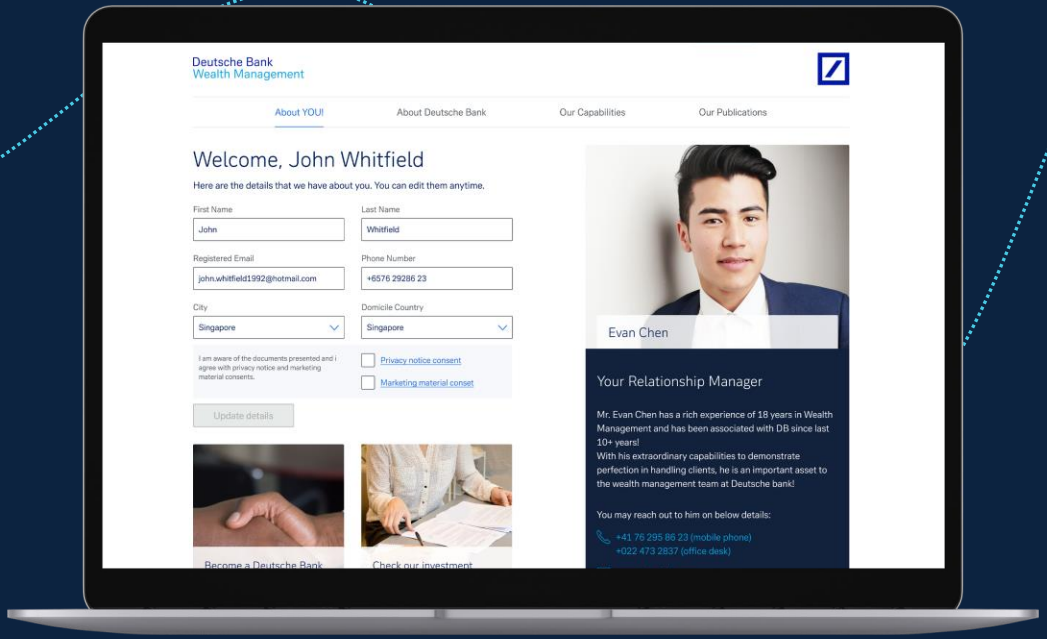

ONBOARDING, FIRST TIME USAGE & LOGIN

Seamless and digital registration helps customers to unlock their e-banking in the fastest way possible

John Whitfield is a UK-born former investment banker located in Singapore for 25 years now. He left his former workplace 5 years ago and founded his own start-up in the financial sector. He entered Deutsche Bank for its corporate bank solutions and is now also a client with IPB.

After some initial information provided by his RM Evan Chen, he decided to register for using the new DWO+ digital service and downloaded the app from the AppStore on his phone.

A digital onboarding journey guides users through the DWO+ registration.

Sources: Images for "John" & "Evan" by Andrea Piacquadio and Royal Anwar (Pexels.com)

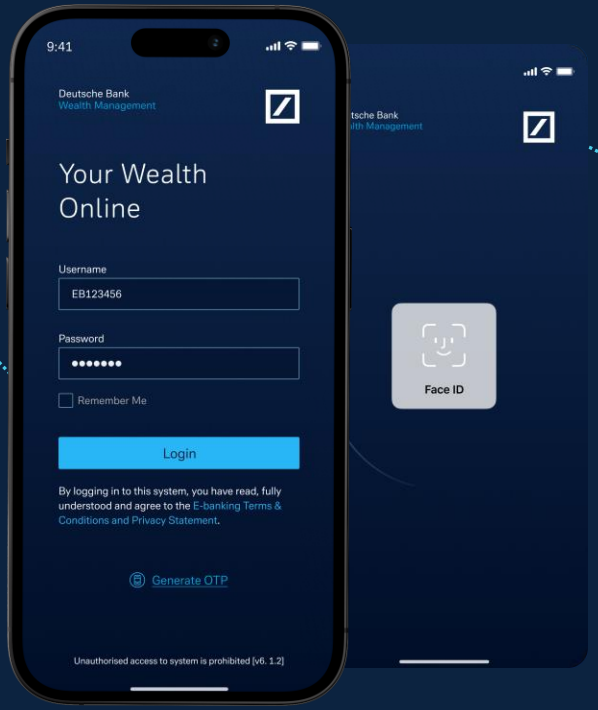

Improved & Effortless Log-in minimizes the barriers of entry

ONBOARDING, FIRST TIME USAGE & LOGIN

"When using DB digital channels, I want to have little effort registering and logging into it and an explanation of how to use it properly."

John is multi-banked and had his fair share of different login procedures for his online banking accounts. He's happy to see, that DB is providing a secure two factor authentication that also works with the biometric identification capabilities on his phone.

Users can easily login via 2FA using username & password and/or biometrics.

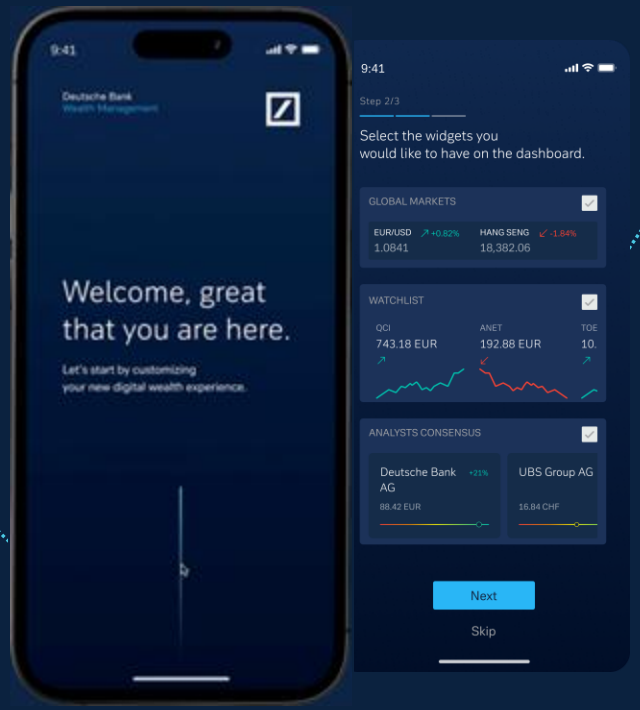

A few simple questions help to individualize their DWO+ experience

ONBOARDING, FIRST TIME USAGE & LOGIN

"I have a very busy life – so I want to see at first glance what is most important to me. I am fine with customizing this here, then I have everything I need."

When using it for the fist time, he can customize his experience in a short setup flow.

By answering a few simple questions and selecting from a variety of informative widgets he can individualize his DWO+ experience based on his preferences.

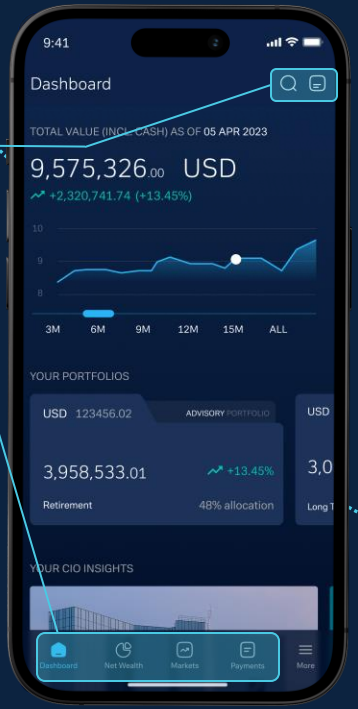

Users can choose portfolios and informative widgets to be shown and set their content preferences.

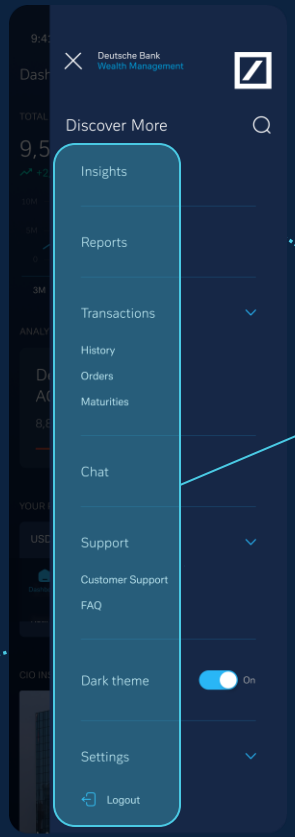

The menu gives an overview of the expanded service offering

FUNCTIONAL SCOPE

Top Navigation
- Global Search
- Notification & Chat

Main Navigation
- Dashboard
- Net Wealth
- Markets (Trading & Content)
- Payments

Secondary Navigation
- Insights
- Report & Statement Downloads
- Transactions
- Chat
- Support (incl. dedicated help desk)
- Switch light/dark theme
- Settings

John explores the app navigation and gets a quick overview of the new functional scope of DWO+.

FUNCTIONAL SCOPE

Users can individualize the dashboard to keep track of what is most relevant for them

The Dashboard serves as a jumping board into other sections and provides John with a quick overview of his wealth. Here he easily adds new widgets for the functionalities that he uses most.

"I have to make payments from my account quite frequently – so it's great to be able to keep track of them right in the dashboard."

Users can edit the dashboard screen by picking and choosing widgets of interest.

A dedicated DWO+ support helps users quickly with all process and tech-related issues

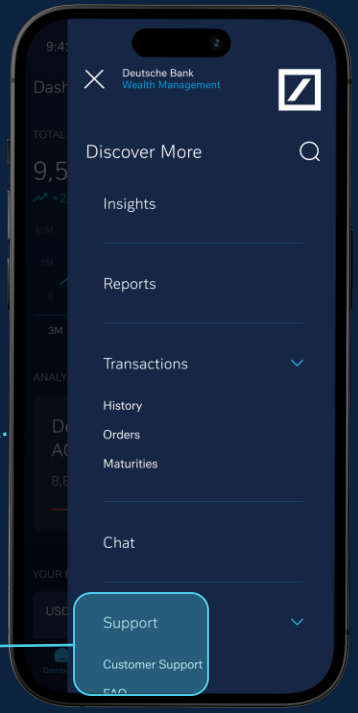

FUNCTIONAL SCOPE

When exploring the app, he sees that he now can directly reach out to the support team.

"If I encounter a problem, I want to have immediate access to the right support – either for account related problems or technical issues."

Support
- Customer Support
- FAQ

The menu offers a quick access to both customer support (tech help desk) and FAQs.

DWO+ leverages personalized, actionable and snackable content to drive client engagement

FUNCTIONAL SCOPE

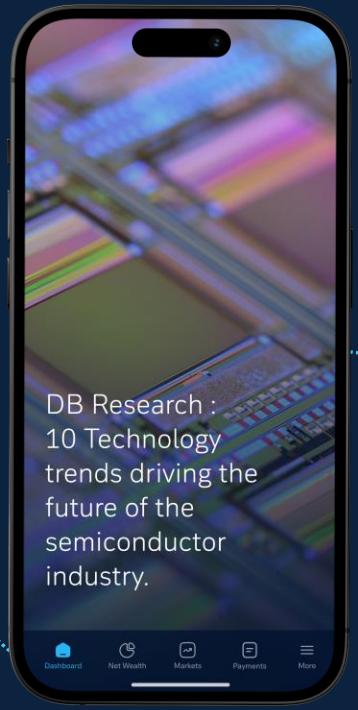

After a while John receives a push notification: there is a new DB research report available about the future of the semiconductor industry. He is very interested in that field and therefore reads it carefully. But as he is on the go, he decides to continue tomorrow.

Deutsche Wealth Online + Now

New Report Available
10 technology trends driving the future of the semiconductor industry.

"I want to partake in my bank's wealth management expertise and have access to insights that are relevant to me and my investments."

Content is featured in different sections like Dashboard, Markets and Insights – always contextually fitting.

The revised Net Wealth section offers both a high-level overview and a variety of in-depth modules

FUNCTIONAL SCOPE

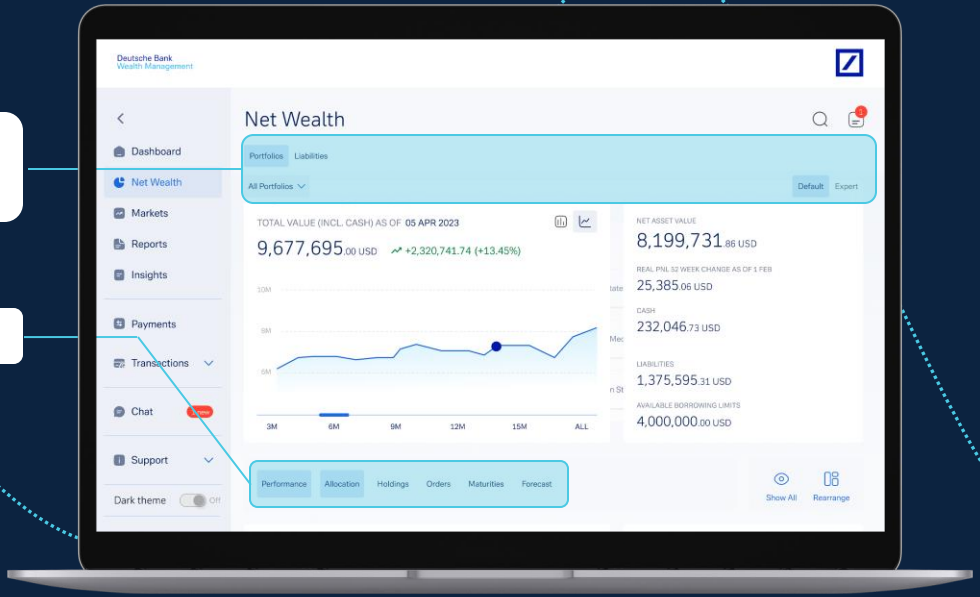

SECURITY, STABILITY & PERFORMANCE

The next day, John logs-in to DWO+ on his laptop. As the expert that he is, he chooses to switch his Net Wealth view to “expert mode” to have more detailed information of his real-time wealth performance.

Default vs. Expert Mode
Portfolios Selection
Liabilities Section

Selection of Sub-Sections

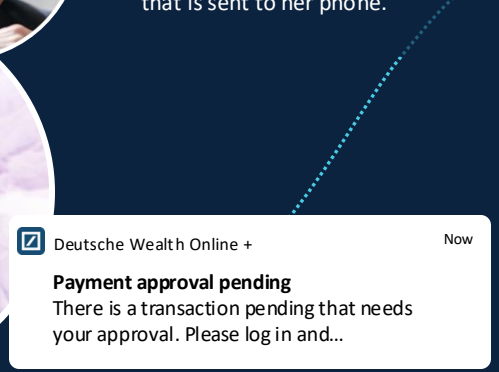

Users can adapt the Net Wealth view based on their needs – e.g. they can choose between default & expert view, consolidate across different portfolios and arrange the screen layout.

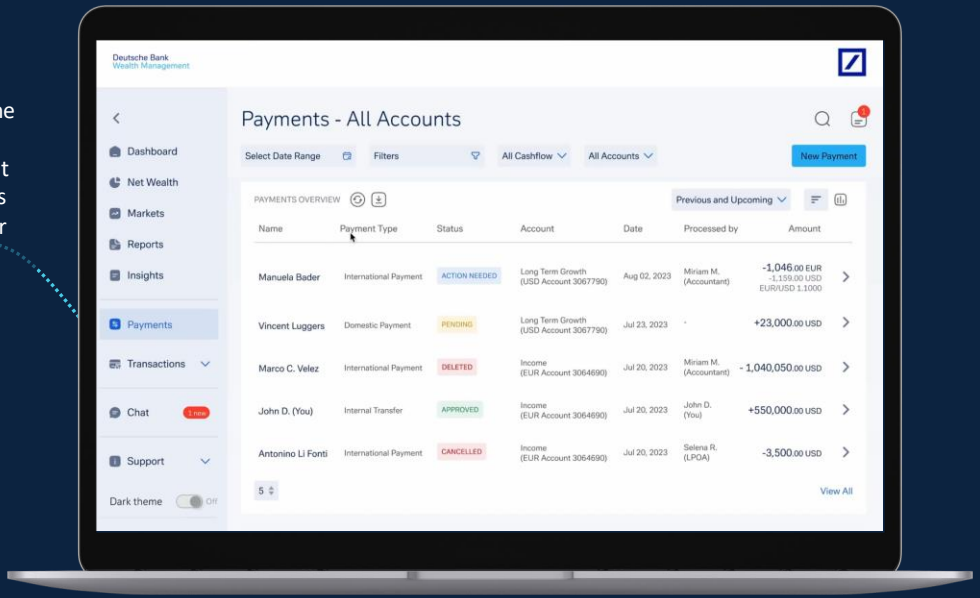

Payments are now also rolled out to more clients and regions

FUNCTIONAL SCOPE

While he is at it, John remembers that he his daughter's US college tuition is due. Since he wants to pay it from an account that he shares with his wife, this process triggers a request to co-sign the transfer that is sent to her phone.

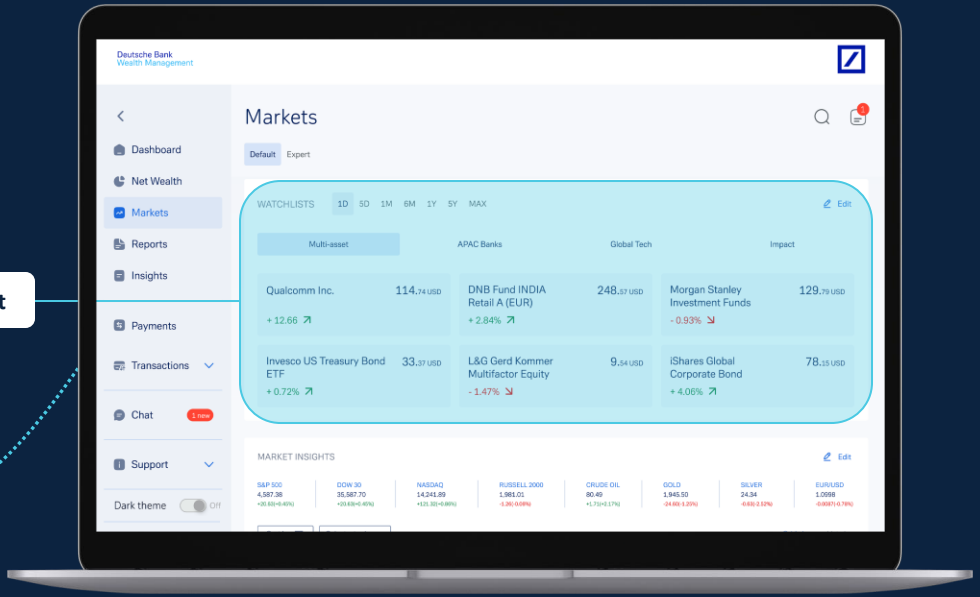

Users can see an overview of, execute (e.g. internal domestic, international, FX, instant) or manage their payments (e.g. standing orders, saved beneficiaries, limits etc.).

Trading capabilities are rolled out to even more clients

FUNCTIONAL SCOPE

"Now, that I can search for certain stocks that I am interested in, I can quickly check the details and execute a trade. All by myself, that's nice!"

Watchlist

John remembers the semiconductor article that he read on his phone and decides to investigate more.

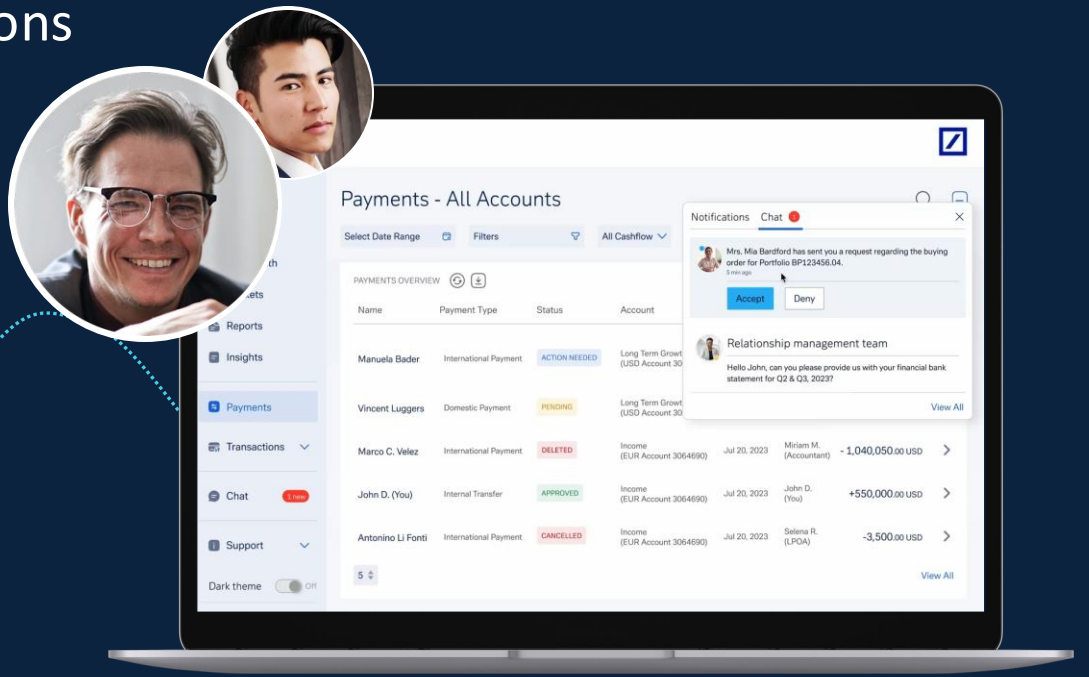

Via the newly rolled out trading functionality John pulls up the stock's detail page showing the firm's past earnings as well as analyst views. As all looks promising, John saves the stock to his watchlist for a later discussion with his RM Evan.

Users have access to market insights and their watchlist, can search & explore certain assets and buy or sell based on real-time data.

FUNCTIONAL SCOPE

A high-touch relationship enhanced by digital communication to take actions

"Even though I am using a digital channel I want to have close contact to my bank and trusted partners there and be served personally."

Users can access a chat interface to approach one or more contact persons from within the app. Next best actions like digital signature or document upload support this digital servicing process.

Thinking about this some more, John decides to proactively approach his RM about his opinion and whether this could fit his portfolio. He opens the in-app chat to write him.

After some short conversation, John instructs Evan and his team to execute a limit order. Mia Bradford, Evan's assistant, prepares the order and asks John for his approval using the digital signature functionality within the chat.

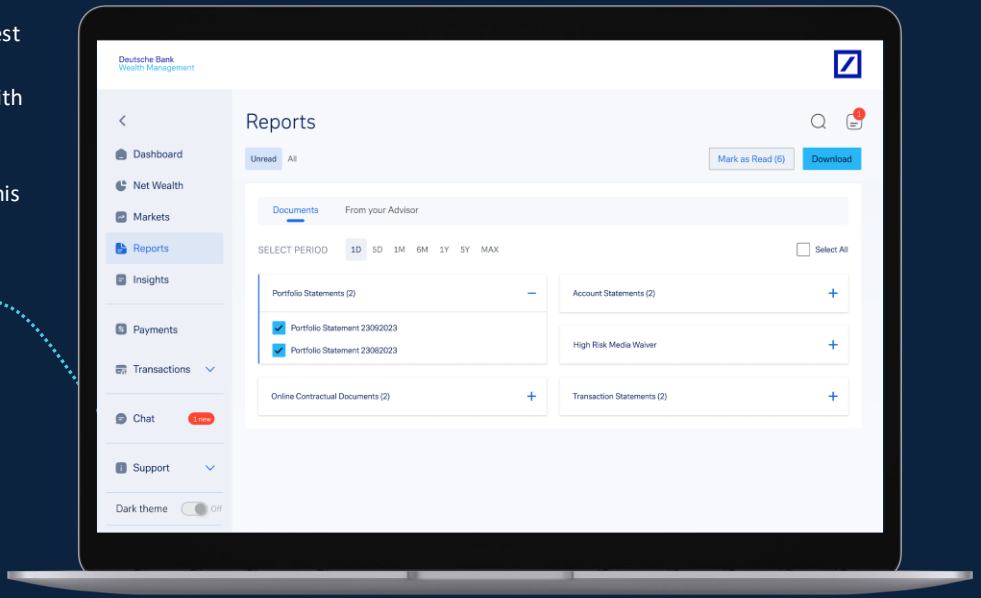

FUNCTIONAL SCOPE

Users can serve themselves to save time and effort e.g., by pulling reports or changing addresses

With the tuition paid and his newest investment placed, John wants to conclude today's DWO+ session with a short glance into his reports. He chooses the latest portfolio statements to download them to his file storage.

"I want to be able to act on my behalf where possible to save time and efforts."

Users can check their reports and statement, select a custom period and download them.

… This also frees up capacity on the part of RMs, which they can use to pursue the bank's growth strategy.

With John being able to execute trades and payments on his own or quickly approve executions via the available in-app chat, Evan, Mia and their colleagues have more capacity to work on growing their clients at Deutsche Bank.

For example, based on John's interest profile with regards to content, Evan and his team now know about John's specific interest for ESG investments and will bring this topic up in their next quarterly update session.

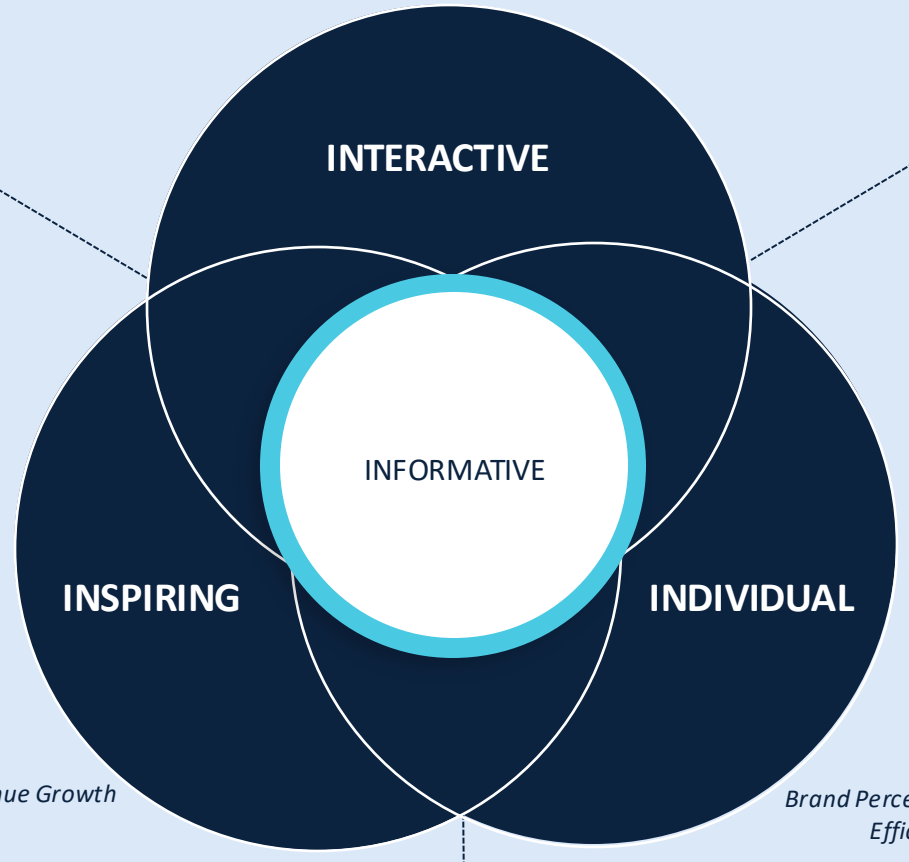

After all, advisory is what they love about their job.

"With 3 hours of my day saved from administrative tasks, I now have the time to discuss prospect strategy with my team."

In the dawn of a digital renaissance, we envision a world where wealth management is seamless, personalized, diverse, and deeply connected.

Welcome to the heart of DWO+

HOW?

How will we translate vision into reality and bring DWO+ to life?

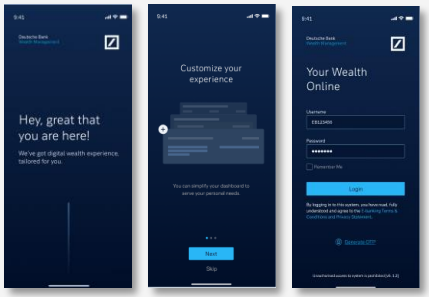

The Service Blueprint provides a holistic view on the target DWO+ and acts as the first step towards the operating model

Zoom-In: the service blueprint provides three connected lenses to view upon all relevant aspects of DWO+

Through the client lens and **all experiences faced** in every step of the journey

CLIENT EXPERIENCE

PROCESSES

Through the process lens and **all actions taking place in the background** in every step of the journey

CAPABILITIES

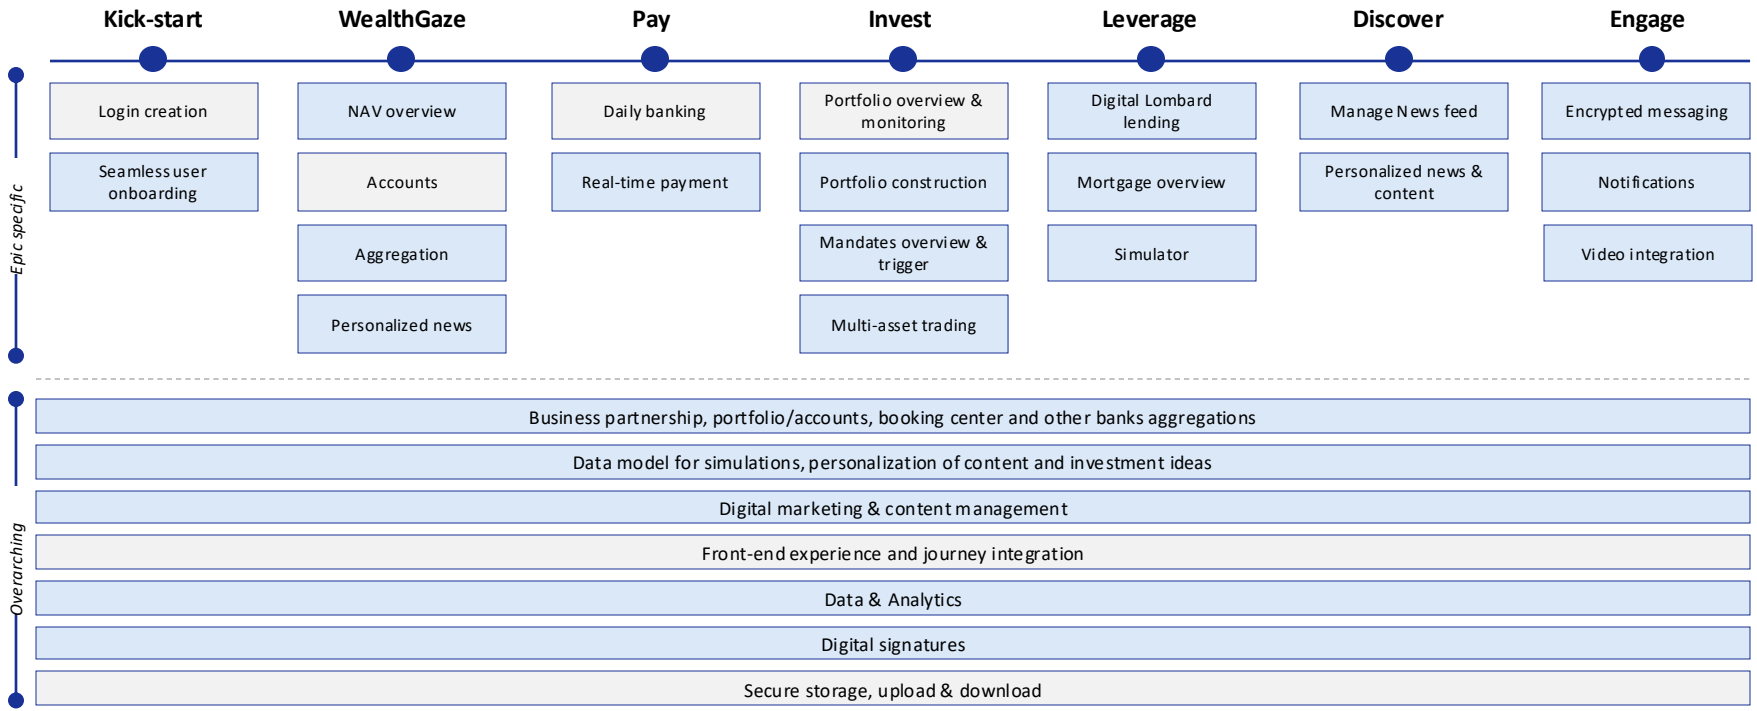

DB products | Analytics
Real-time data | Real-time data

Through the capability lens and **all capabilities which require advancements** in every step of the journey

Examples per Epic in Appendix

We identified the required key capabilities and mapped them along the DWO+ client journey to identify white spots

Not exhaustive

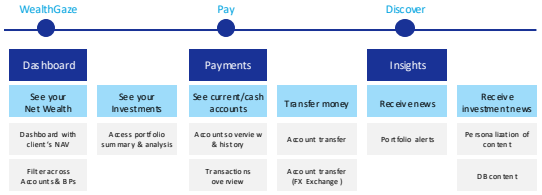

Existing | Missing

Detailed MVP cut in Appendix

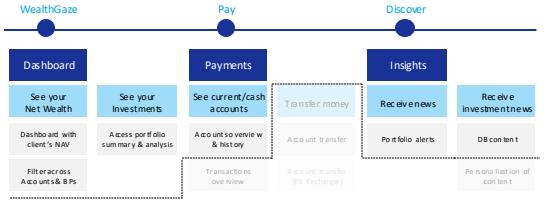

From the service blueprint, we prioritized epics and features to arrive at a feasible MVP cut generating client and DB value

Indicative

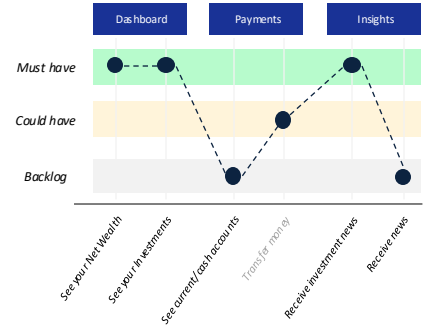

Step 1: Define

Step 2: Cut

Step 3: Prioritize

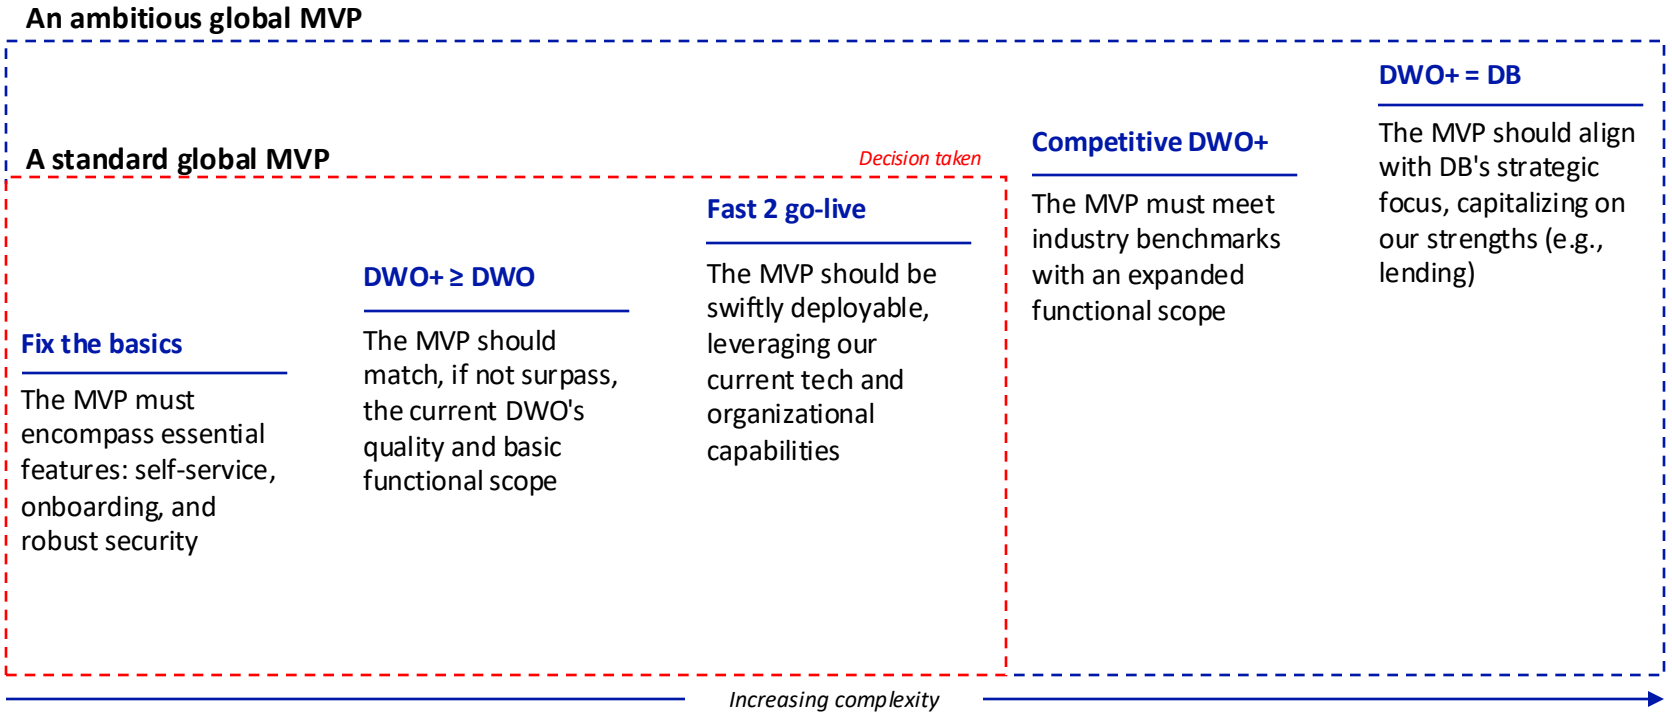

- Articulated the **main goals** and **value proposition of DWO+**
- Translated **DWO+** into high-level **epics** (e.g., payments), representing major functionality areas & **features**, fulfilling the epic's purpose (e.g., transfer money)

- Analyzed the **epics and features** to determine their **potential value** to the clients and RMs (must, should, delight)
- Assessed the **complexity and resources** (e.g., IT) required to develop the feature and/or functionality

- **Prioritized** functionalities along the dimensions of MVP must have, MVP could have & Backlog
- Decided on **initial level of feature fidelity** needed for the initial **MVP** version

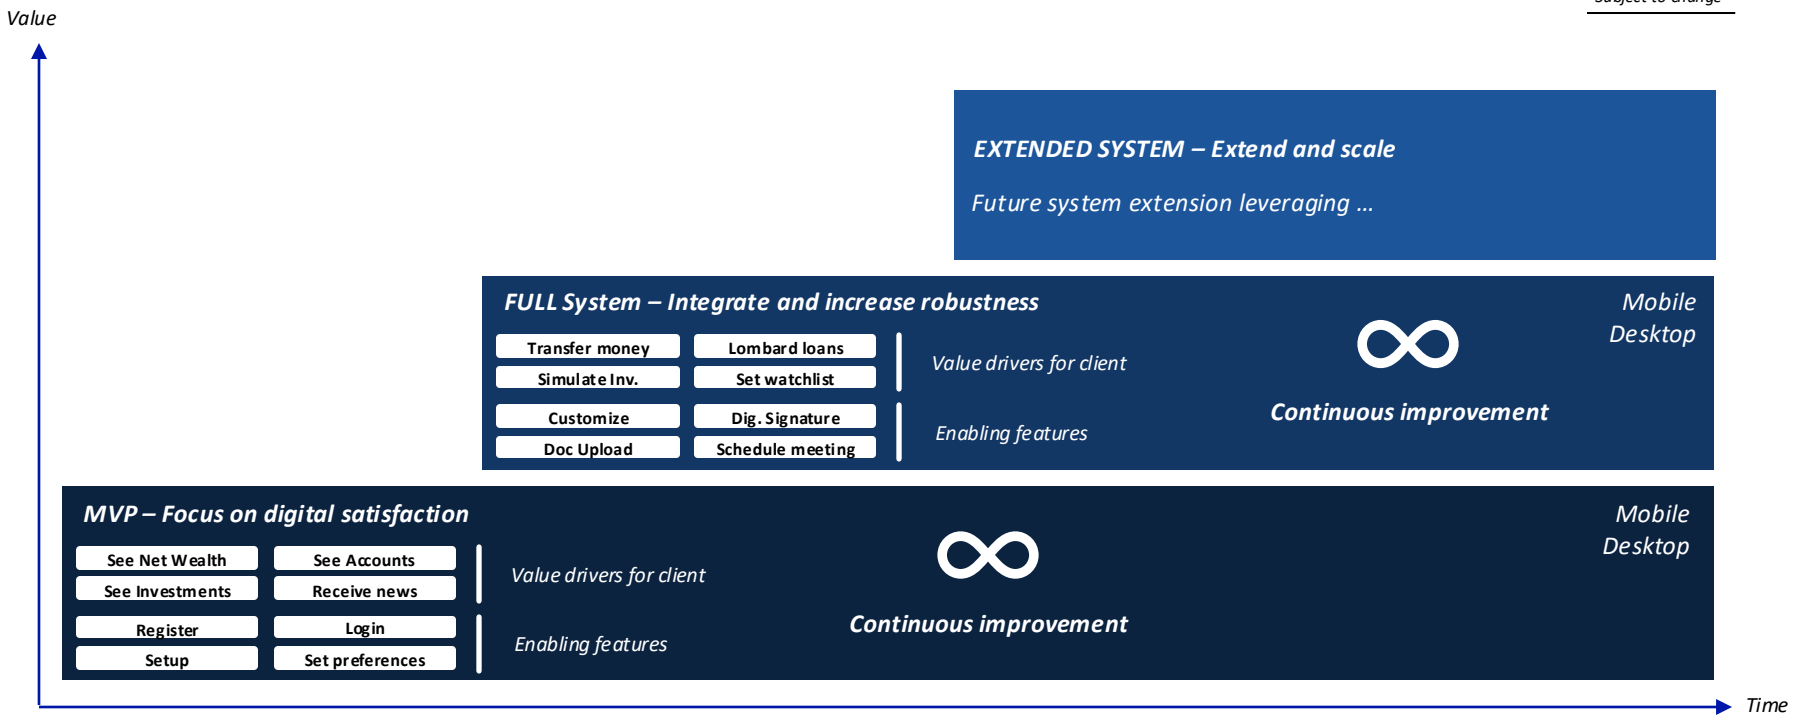

Detailed MVP cut in Appendix

We chose the pillars of a standard global MVP as the core foundation of our MVP cut

The DWO+ journey will be a staged evolution through continuous improvement from MVP to extended system

Subject to change

By capitalizing on our core DB strengths and enhancing our capabilities in key areas we will deliver the digital client experience of tomorrow.

Appendix 1
Research Findings

First client tests provide spotlights on current issues and desired enhancement for a reimagined DWO+ (1/2)

Up until now there have been 3 interviews conducted, all of them were HNW and UBOs.

(1 internal + 2 external clients)

REGISTARTION & LOGIN

Though Registration & Login are **not a part of the testing**, some report issues with the current version:

- Registration and FTU does **not feel valuable** & state of the art (paper process)
- Retrieving login credentials is **cumbersome/not possible**
- Login & loading is **lagging**

PAYMENTS

- Clients separate between investment and current account – and **don't pay frequently** from the latter. Hence having payments is a **"nice to have"**
- Full satisfaction only with QR Code payments SEPA, standing order, FX, transaction history (+search)

INSIGHTS & MEDIA

- **3 qualities of content presented is generally perceived as valuable** (snackability, actionability, personalization) w/ various enthusiasm
- **Skepticism towards relevance** as (current) content experience is perceived as
  - a) less relevant compared to alternative sources
  - b) very basic & general
- Clients are generally **open to & appreciate various content formats**

TRADING

- Perceived **usefulness for all** w/ precondition of **real-time data,** some wish for incentives
- **Differences based on trading attitude**: Those who focus on execution only need very basic info (e.g. order volume, offer quant & bid/ask), those that explore need more (e.g. watchlist; market view, analyst view)
- **Asset classes: very various needs**, uncertainty whether derivates/structured products needed
- **Analyst view appreciated** (w/ buy/sell shown)

* except ETRA constrains for one

First client tests provide spotlights on current issues and desired enhancement for a reimagined DWO+ (2/2)

With regards to devices & design, clients leaned more towards using mobile (phone/tablet)

With regards to design, clients preferred the light look & feel and customization of layout/font size.

CONSOLIDATED OVERVIEW

- **Default view preferred expert "nice to have":** information breadth/depth in sketches is sufficient but some wish for **real-time evaluation**
- **Consolidation across portfolios very appreciated**, but only applicable for some
- **Consolidation across bank receives diverse feedback** and is mainly seen as a **nice to have**

SECURE MESSAGING / CHAT

- **Generally perceived well**, although lack thereof is no pain point currently, but next-best-actions are seen as added value if they make processes leaner
- Individual skepticisms towards change of habits, chat bots & unannounced (video)calls from client to RM

CUSTOMIZABLE DASHBOARD

- A **customizable dashboard** that consolidates information across the service in widgets is **generally appreciated**
- Clients feel **comfortable to put in customization efforts**
- Most important info clients focus on is **own performance, related news as well as markets**
- Some **additional ideas**: news from RM, diverse new content, events, top movers, largest exposure, equity to loan value, etc.

LOANS

- Liability view for lombard was shown to 2/3 respondents and was **perceived as "interesting" and "highly valuable"**
- Both pointed out that **real-time data is relevant** to assess the current eligible collateral and can be a **prerequisite for trading**
- **Individual ideas:** incentivization

* except ETRA constrains for one

Appendix 3
MVP Cut

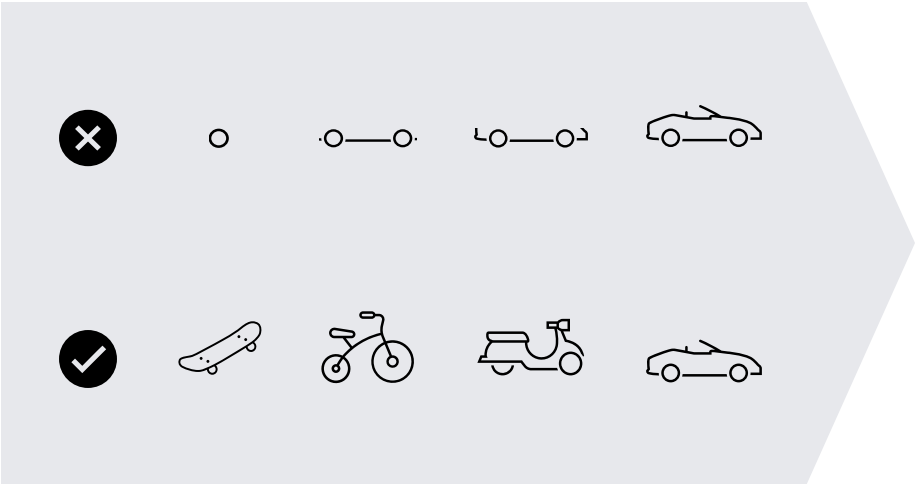

Definition of an MVP

Minimum	The MVP should include only the core features necessary to demonstrate the product's value and functionality
Viable	The MVP should be functional and usable, even if it lacks certain advanced features or polish
Product	The MVP should represent a tangible product or service where users can interact with and provide feedback on

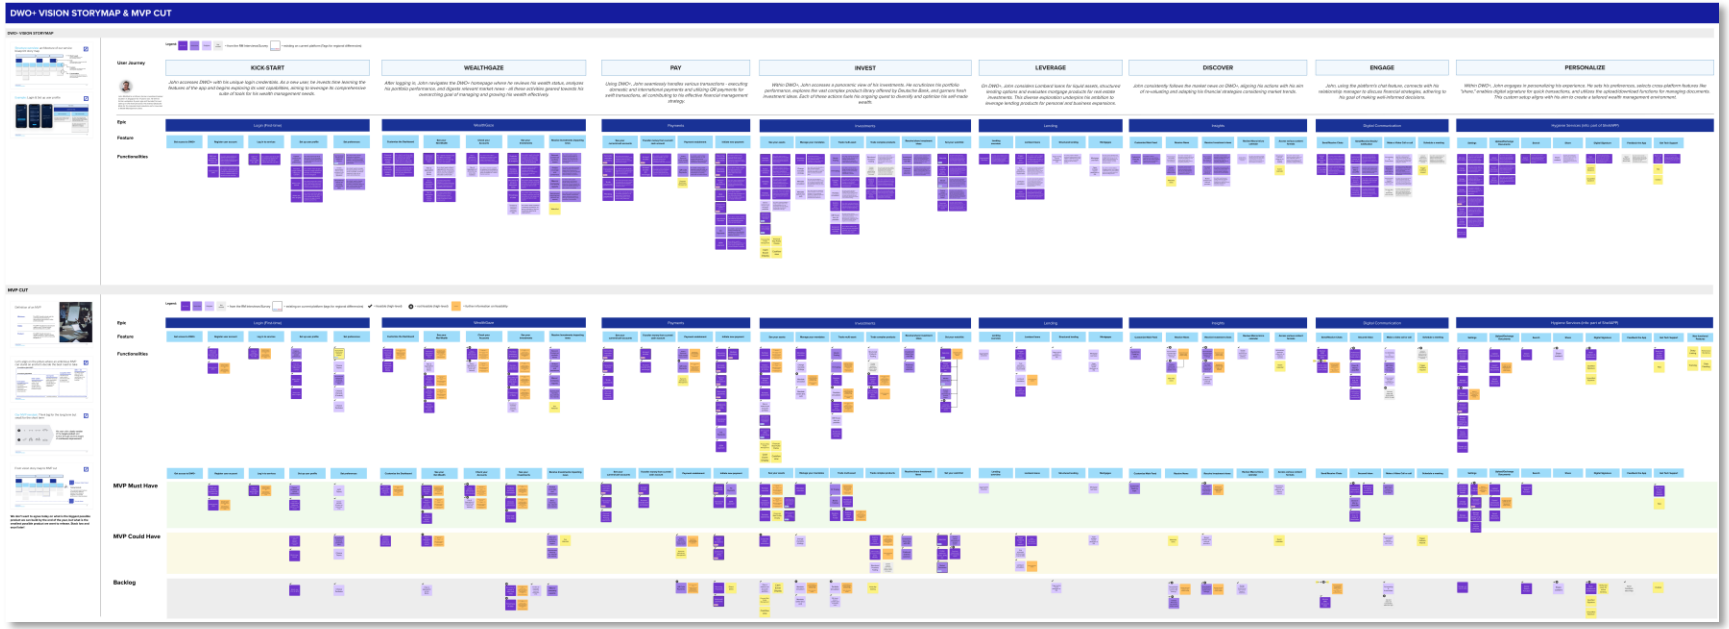

Our MVP mindset: Think big for the long term but small for the short term

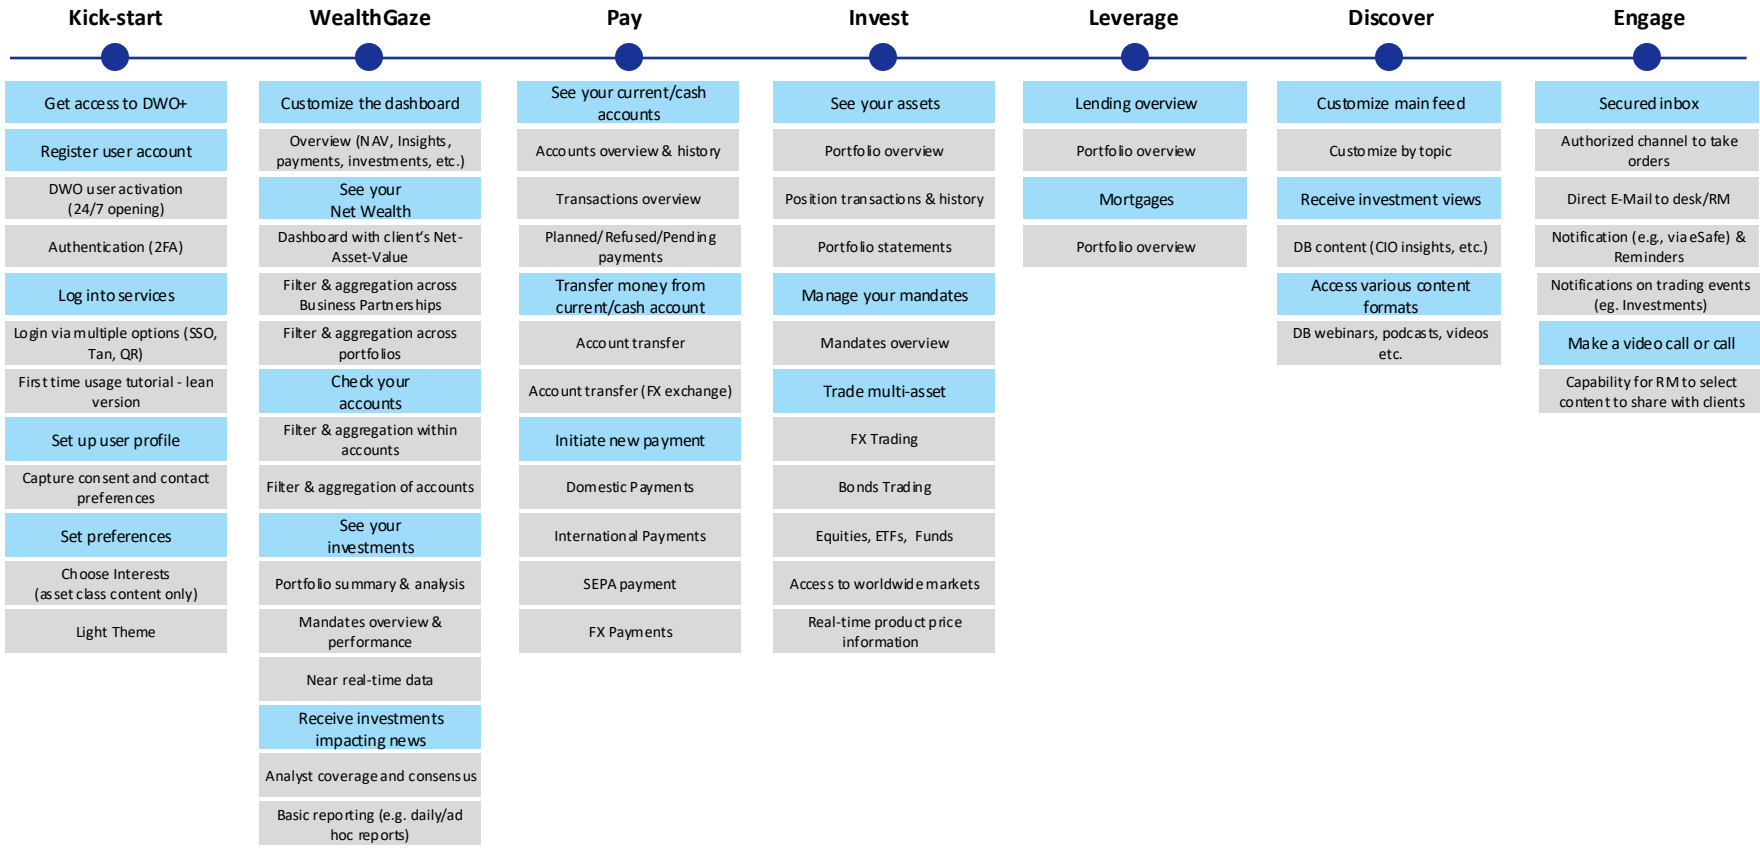

We start with a **basic version** of the **target product** and evolve through several stages of **continuous improvement**

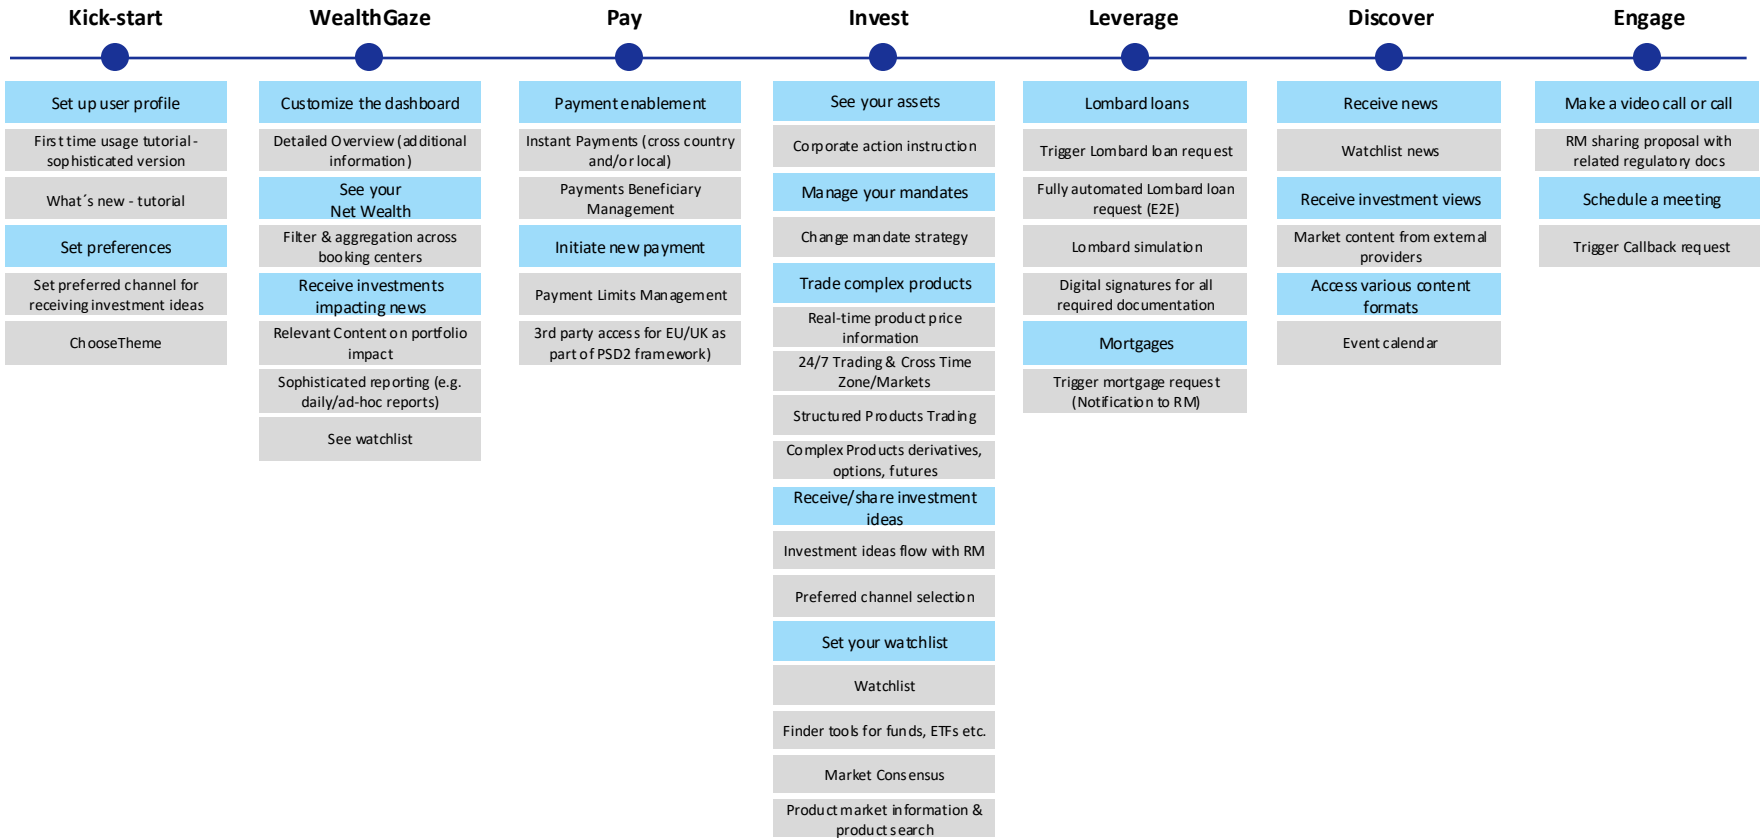

We prioritized DWO+ functionalities from the Vision Storymap into MVP Must haves, Could haves and Backlog

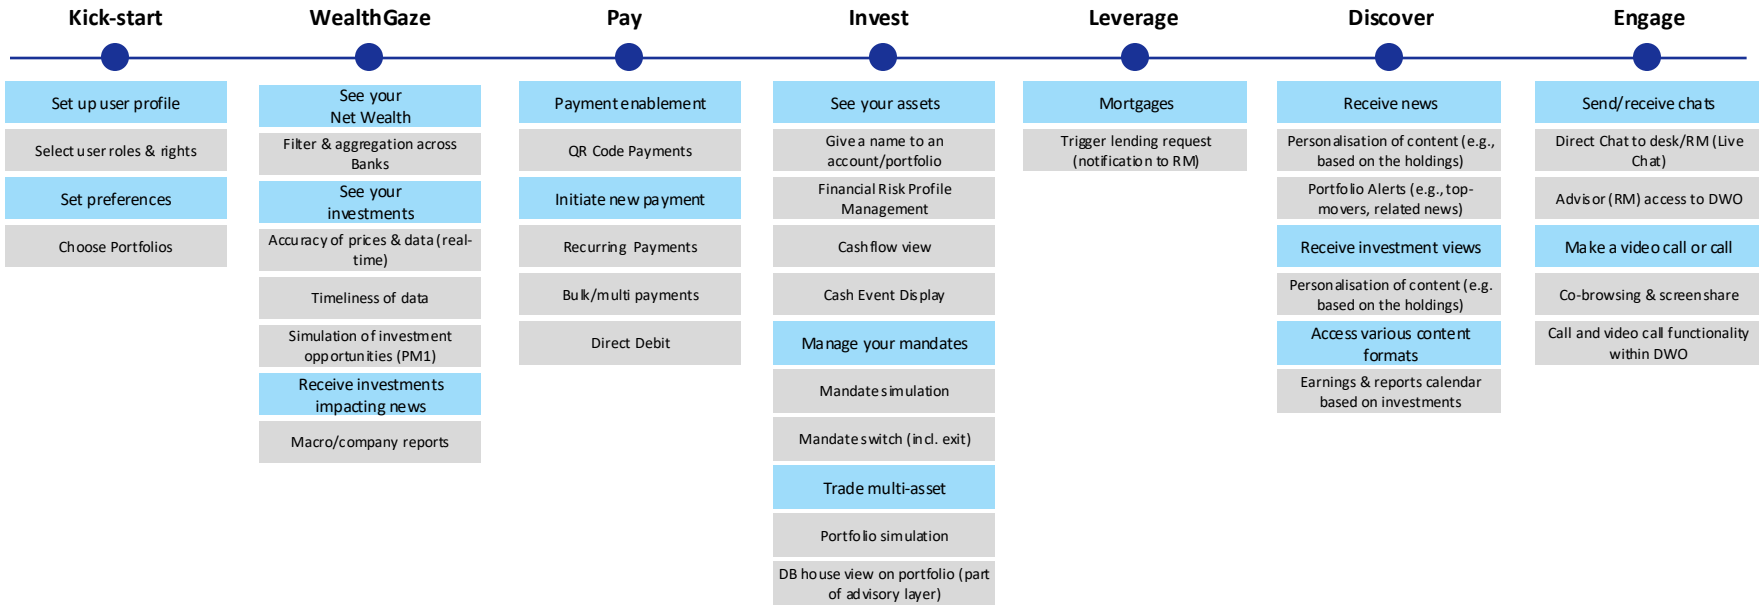

MVP cut: Must haves

MVP cut: Could haves

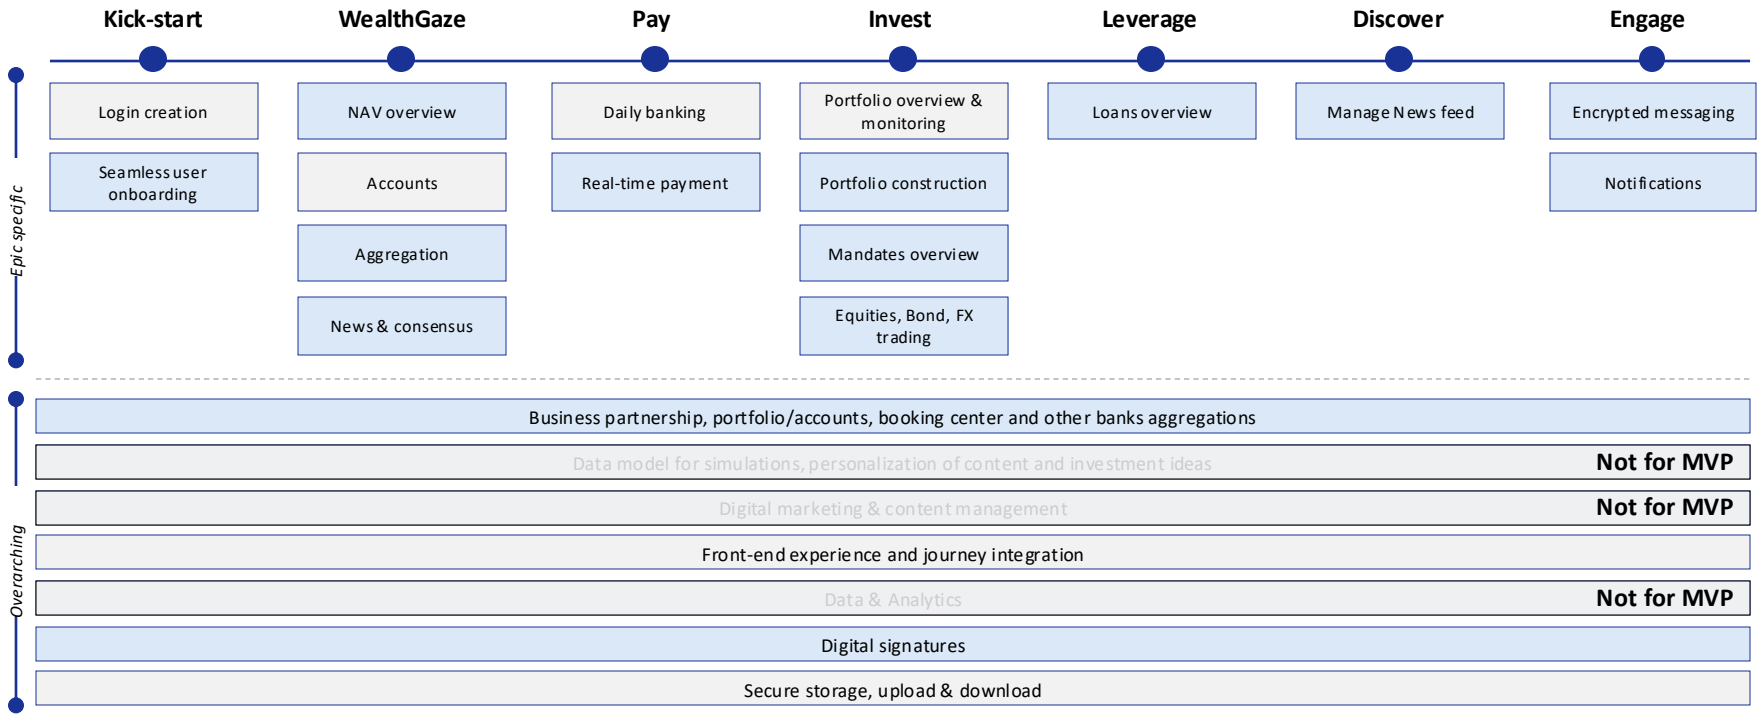

MVP cut: Backlog

For the MVP we are focusing on the key capabilities to achieve digital satisfaction first

Not exhaustive

Existing | Missing
